

Getting an Ear Exam

This is a story about going to the ear doctor. The doctor wants to make sure my ears are strong and listening well. I can tell the doctor at any time if I need a break.

I will enter the doctor's room and sit down on the exam table.

**The friendly doctor will
walk into the room.**

The friendly doctor will show me a special tool called an otoscope.

The tool has a short rubber tail that will shine a light into my ear so the doctor can see what's inside.

The doctor may ask me to move head in different ways or touch my ear. This will help the doctor see inside my ear even better!

The doctor will look into both my ears.

If I feel uncomfortable, I can hold someone's hand or ask the doctor for a break.

I did a great job learning how to get an ear exam.
